CHALET LE DAHU DU HAMEAU

CHALET IN THE HAMEAU DE LA TAGNA

150 m2
5 bedrooms + cabin
5 bathrooms

In the heart of La Tania
at 1,400 m altitude

---

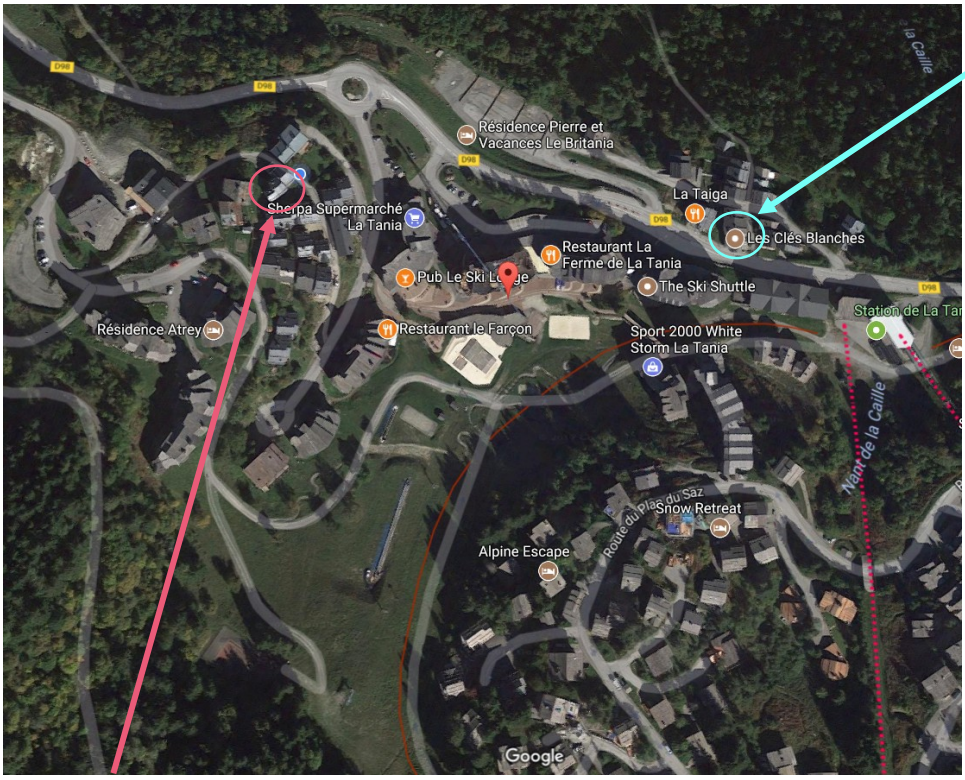

100 m from the shops and the ski front

Enjoy it summer and winter

CHALET LE DAHU DU HAMEAU

Laurent and Céline Namer
73120 La Tania
(provided on booking)

ON ARRIVAL

Les Clés Blanches:

Our concierge service takes care of everything: key handover, bed linen, repairs, etc.

If you need anything, you can contact Mr Perret on (provided on booking)

The chalet:

To reach the chalet, go straight on at the roundabout, as if leaving the resort, then 200 metres further on turn left, following the signs for “Hameau de la Tagna”.
You will come to a small apartment building and a car park.
Just after it, a small dirt road goes down on the left and leads to the chalet.
There are 2 parking spaces in front of the chalet; you can use the one on the right, keeping close to the wall.
However, this area is not cleared of snow, so we recommend unloading the car in front of the chalet and then parking in the car park above.
On the road in winter: in Savoie, winter tyres or snow chains (or snow socks) in the boot are compulsory from 1 November to 31 March (Mountain Law). The road up from Moûtiers can be snowy, so bring chains even though the road is usually well cleared.

Key handover:

2 sets of keys are held by “Les Clés Blanches”. We recommend calling Mr Perret on (provided on booking) when you reach Moûtiers to arrange where to meet: either at their office at the entrance to the resort or directly at the chalet.

If you are arriving late, let us know: we have a door with a keypad that we can unlock, so the keys can be left inside.

The keypad doors are at the ground-floor entrance and on the top floor on the terrace, reached from outside by the stairs. The codes will be sent to you by email.

Resort map:

The resort map, with the chalet marked, is on our website:

- ledahudelatania.fr, section “Resort map”
- The chalet is in the Hameau de la Tagna, east of the resort centre (blue label below).

Resort map © Courchevel Tourisme, reproduced with permission. Scan the code to open the map on your phone.

SERVICES

Internet / Phone / TV	The chalet has ADSL internet with TV and phone. Network name: Chalet_Renoir Password: given on arrival Chalet phone number: (provided on booking) The subscription includes free calls to landlines in many countries, and to mobiles in France. Calls to premium-rate numbers will be charged to you at the end of your stay.
Cleaning	End-of-stay cleaning is done by the concierge service “Les Clés Blanches”. However, we ask you to leave the kitchen in good order (no dirty dishes, fridge emptied, etc.).
Included in your stay	Bed linen, bath towels and tea towels are provided, and the beds are made up for your arrival. End-of-stay cleaning and the tourist tax are included in the price.
Optional extras	Cot and high chair on request, for a supplement, from the concierge service Les Clés Blanches. Please book them before you arrive.

Your departure	Check-out by 10 am. Before leaving, please: – leave the kitchen clean: dishes done, fridge emptied; – take rubbish and glass to the recycling point in the car park above the chalet; – put remote controls, Xbox controllers and motion sensors back in place; – close the windows and the terrace door, and switch off the lights; – return the keys to Les Clés Blanches as arranged with Mr Perret.
House rules	The chalet is non-smoking: you may smoke on the terrace. Pets are welcome. Please respect the peace and quiet of the hamlet in the evening.
Useful numbers	Tourist office: 0479084040 La Tania medical centre: 0479082960, open 7 days a week Les Clés Blanches concierge (Mr Perret): (provided on booking) Laurent Namer: (provided on booking) Emergencies: 112 (European number), ambulance (SAMU) 15, fire brigade 18 Accident on the slopes: alert a ski patroller or the staff at any ski lift.

THE LIVING ROOM

Lighting

As well as the usual light switches, most of the living-room lamps can be controlled with a remote to adjust brightness, etc.
The kitchen light has a motion sensor and will switch on automatically when you enter the room.
On the left is a photo of the standard set-up. At the bottom, the normal switch that controls the lights. At the top, the radio-frequency control unit that controls the bulbs directly.
We recommend leaving the standard switch on auto and controlling the lamps with the radio-frequency unit. If the lights do not come on, it is very likely that the switch has accidentally been turned off.

The fireplace

The fireplace is in working order.
The door slides upwards so you can put in wood, light the fire and clean out the ashes.
There are two handles on the left and right of the fireplace for raising and lowering the glass. When they are cold you can operate them by hand; when they are hot, please use the metal hooks provided for this purpose.

The air intake is controlled by the slider shown in the photo below. Use the metal hook to move it.

The fireplace is designed to be used closed, but you can also use it open. In that case there is no air control and the wood will burn faster.
There is a Karcher vacuum cleaner next to the fireplace that you can use to clean it.
For more information, search for STUV 21 online.

The television

The television is connected to the Freebox. To receive channels, select the HDMI1 input if this does not happen automatically.
To get started:
* Switch on the TV with the black remote (Philips)
* Switch on the box with the grey remote (free)
* Select Télévision – Freebox TV
* If this does not work, check that the TV is on HDMI1 using the Philips remote, and that the slider on the device circled in blue below is also set to 1.

* To return to the main menu, just press the ‘free’ button on the grey remote.

The TV can be temperamental. If, after switching it off, the Philips logo stays lit, you may need to unplug it and plug it back in. To make this easier, we have fitted a white button under the living-room coffee table. Just press it and the TV will restart.

There is an Xbox with a few games for you to use. Unfortunately our children have limited the number of games we can leave at the chalet 😊. The controllers, together with their USB charging cables, are in one of the drawers of the unit next to the fireplace. Please remember to put everything back for the next guests.

	The full TV user manual is available here:  Television salon.pdf
The terrace	Please let us know if you have any problem with the terrace. The lighting is controlled by the white button next to the fridge: • A short press switches the terrace lights on/off. • A long press switches off all the outdoor lighting. We advise against using the barbecue in winter, as the smoke tends to linger because of the low temperatures. If you really want a barbecue, please make sure the protective mat is properly placed under it. A wooden terrace can catch fire if a barbecue is misused, and this would be entirely your responsibility. In summer, you can buy charcoal in Le Praz or Méribel.

THE KITCHEN

Please let us know about anything that does not work properly during your stay. 😊

The range cooker

To set the clock, press buttons 2 and 3 at the same time while pressing the up/down buttons 4 or 5.

For programming, please refer to the user manual attached below, from page 27

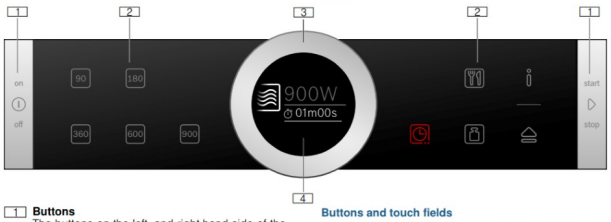

914776020-FR.pdf

The fridge-freezer

The kitchen has a large fridge-freezer.

The microwave

A very standard microwave; just note that the door opens with the button on the right.
To use the microwave, select the power (left), turn the central knob to set the time and press start (right).
The full manual is online: Bosch manual (PDF)

1 Buttons
The buttons on the left- and right-hand side of the control panel have a pressure point. Press these buttons to activate them.
For appliances that do not have a stainless steel front, these two button touch fields do not have a pressure point.

2 Touch fields
There are sensors under the touch fields. Simply touch the respective symbol to select the function.

3 Rotary selector
The rotary selector is fitted so that you can turn it indefinitely to the left or right. Press it lightly and move it in the direction required using your finger.

4 Display
You can see the current adjustment values, options or notes in the display.

Controls

The individual controls are adapted for the various functions of your appliance. You can set your appliance simply and directly.

Buttons and touch fields

Here you can find a short explanation of the various buttons and touch fields.

Symbol		Meaning
Buttons		
⏻	on/off	Switching the appliance on and off
▷	start/stop	Starting or stopping an operation
Touch fields		
90	Microwave output	Selects 90 watts
180	Microwave output	Selects 180 watts
360	Microwave output	Selects 360 watts
600	Microwave output	Selects 600 watts
900	Microwave output	Selects 900 watts
⏲	Time-setting options	Select time-setting options
🍴	Programmes	Selects a programme
⚖	Weight	Selects the weight in the programme

The dishwasher	The dishwasher is controlled from the top of the door. To start it, select the programme (we recommend auto) and press start (right). When you close the door, if the dishwasher is ready to start, a light on the floor shows the time remaining. Dishwasher tablets are under the sink.  The user manual is online: Bosch dishwasher manual (PDF)
The meat slicer	The kitchen has a professional meat slicer. The user guide is in the right-hand drawer of the unit next to the television. Please clean it carefully.
The coffee machines	The kitchen has a Nespresso machine. If you prefer, a filter coffee machine is in the bottom of the unit next to the table. Nespresso-compatible capsules are not always available in La Tania, so we recommend bringing your own or stocking up at the Super U in Moûtiers on your way up.

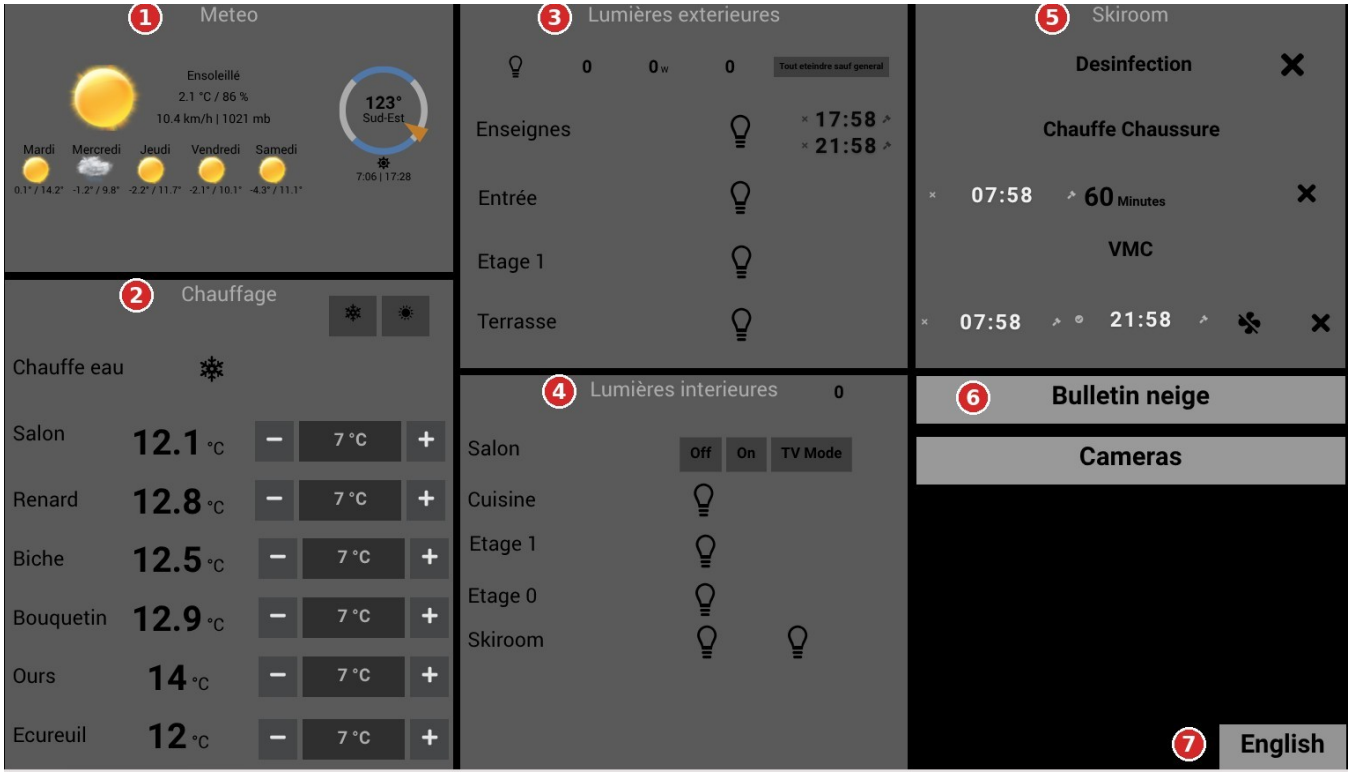

Where to shop?	La Tania has a small supermarket, the Sherpa, for your everyday shopping. In winter it is well stocked, with a good meat counter and cheese cut to order. In summer the choice is more limited. La Boucherie du Praz delivers excellent-quality meat and ready meals. The nearest supermarket is the Super U on the way out of Moûtiers, on the road to Courchevel. It offers online shopping, handy for collecting everything when you arrive before driving up. www.coursesu.com (choose the Super U in Salins-les-Thermes)
Gas	There are two large gas bottles in the small wooden cupboard outside the ski room (next to the bench). A selector lets you switch from one to the other if the first one runs out. If the bottle in use is empty, switch the selector to the other bottle and let the concierge service know so it can be replaced. If you want to turn off the gas, there is a valve in the kitchen, in the bottom cupboard to the left of the range cooker.

The beer tap 😊

We have a little secret hidden in the kitchen: after a day's skiing, nothing beats a small draught beer.
The chalet has a PerfectDraft beer tap. As kegs cannot be found locally, we can supply 2 per week at €40 per 6-litre keg. Please let us know in advance if you would like to reserve some, so that we can manage the stock.
After use, do not throw away the empty kegs: they carry a deposit. Put them back in the cellar with the new kegs.
The machine is fragile; here is a short video showing how to fit a keg. https://www.youtube.com/watch?v=rjKUfXb5bol
Excessive drinking is bad for your health, and possibly for your wallet, as any damage will be taken from the deposit.

HEATING AND HOME AUTOMATION

The chalet has a home-automation system (Jeedom) that controls the heating, lights, ski room and ventilation. Everything is set from the home-automation interface: open the address 192.168.1.28 in the browser of a phone, tablet or computer connected to the chalet Wi-Fi. Bedroom temperatures can also be set from the small screen next to each bed.

The home-automation interface (192.168.1.28): the numbers refer to the explanations below.

Setting the heating (2)	Each room has its own line in the Chauffage (heating) column: the Salon (living room), then the bedrooms Renard (fox), Biche (doe), Bouquetin (ibex), Ours (bear) and Écureuil (squirrel); each bedroom is named after the animal in its light-up frame. – The large figure is the current room temperature. – The grey box in the middle is the set point, i.e. the temperature you want. – Press + or – to raise or lower the set point. The radiator adjusts by itself. Allow one to two hours to gain a few degrees: there is no point setting the maximum, the room will not heat up any faster. We recommend 19 to 20 °C in the living room and 17 to 18 °C in the bedrooms for a good night's sleep. Remember to close the windows while the heating is on. The two buttons at the top of the column change the mode for the whole chalet: the snowflake (❄) switches it to frost protection, with every room at 7 °C, and the sun (☀) switches it back to comfort mode. When you arrive, the chalet is already in comfort mode. The water heater is managed automatically: there is nothing to set. If you run short of hot water, let the concierge service know.
Weather (1)	Today's weather and the forecast for the next few days in La Tania, with temperature, humidity, wind, and sunrise and sunset times.
Outdoor lights (3)	Tap a bulb to switch the corresponding lights on or off: Enseignes (signs), Entrée (entrance), Étage 1 (first floor) and Terrasse (terrace). The times to the right of Enseignes show when they switch on and off automatically. The "Tout éteindre sauf général" button switches off all the outdoor lights at once.

Indoor lights (4)	Tap a bulb to switch the Cuisine (kitchen), Étage 1 (first floor), Étage 0 (ground floor) or Skiroom lights on or off. The figure at the top shows how many lights are on. For the Salon (living room): Off switches off, On switches on, and TV Mode creates soft lighting for watching television.
Ski room and ventilation (5)	Désinfection: starts the ozone treatment of the ski room. The cross stops it. Do not enter the ski room during the treatment or for 30 minutes afterwards. Chauffe chaussure (boot dryer): it starts every morning at 8 am for 60 minutes. You can change the time and the duration. The cross stops it. VMC: the running times of the bathroom ventilation. The fan icon switches it on immediately, for example for a late shower.
Other buttons (6) (7)	Bulletin neige: today’s snow cover and slope conditions. Caméras (cameras): the resort webcams and the chalet’s two outdoor cameras (there are no cameras inside). English: switches the interface to English.

Bedroom screens

The radiators are controlled by the home-automation system. For this to work, please leave them on “prog” and on 4 or 5.
If the automatic system fails, you can take back manual control by setting the radiators to ‘comf’ and adjusting them as you wish.
In each bedroom, a small touch screen is next to the head of the bed. The photo opposite shows the one in the Écureuil (squirrel) room: the set point is at the top, the current temperature at the bottom. Adjust the set point with the arrows. It is the same setting as in the home-automation interface: a change made on one appears on the other.

On the same screen you can also control the bathroom ventilation. Normally the ventilation runs from 8 am to 10 pm. If you want to shower outside these hours, you can switch it on by pressing the VMC button.
If the ventilation hours do not suit you, please let us know, as they can only be changed by the administrator.

The living-room temperature can only be set from the home-automation interface (Salon line).

Bedroom light control

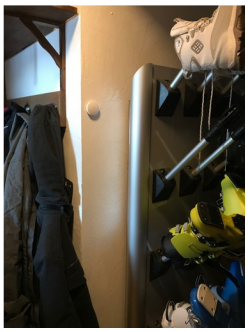

If you press Lumières (lights), you will be taken to a second screen giving access to the bedroom light controls. This screen is still experimental but works quite well.
The colour and brightness of the animal frame can be changed by moving the slider over the colour icons or over the dark-grey/light-grey icon at the bottom of the screen.
If you have trouble with this screen, the switches and the remote control on the middle-floor landing that control the animal frames still work. On the remote, press the button for the number of the room you want and you will be able to control the colour and brightness.

Automatic hall lighting	If you have problems with the automatic lighting in the halls and corridors, there is a simple solution: the motion sensors are magnetic and can easily be removed for the duration of your stay. Please remember to put them back for the next guests, thank you!

THE SKI ROOM AND CELLARS

The boot dryer

The ski room has a ski boot dryer. A button on the wall controls it.
A short press switches it on for 90 minutes, perfect if you come back to the chalet for lunch.
A long press switches it off.
The boot dryer is programmed to come on automatically from 8 am to 9 am.

To limit unpleasant smells in the ski room, an ozone air purifier has been installed. It is controlled by the right-hand button next to the boot dryer.
Warning: ozone is an irritant if inhaled directly. Do not enter the room for 30 minutes after the treatment. The treatment starts 2 minutes after you press the button.

Outdoor lighting

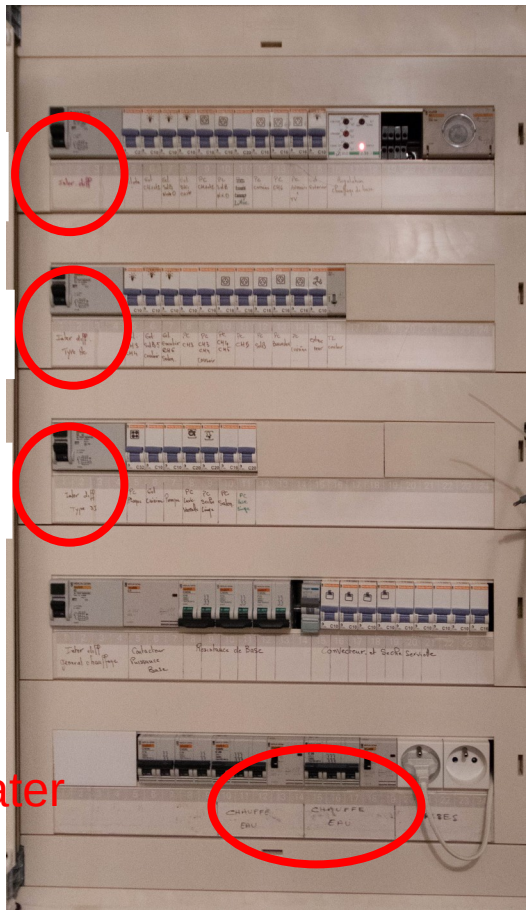

The ski room lighting and the outdoor light are automatic.
There are two motion sensors: one in the ski room and one outside, on the gas bottle store.
If you pass near either sensor, the ski room light comes on. If it is dark, the outdoor lighting will come on as well.
There are two manual switches that override the automatic control.

THE SURROUNDINGS

Around the chalet	Take care when walking around the chalet, especially if you pass under or close to the roofs. If the roofs are covered with snow, it can slide off at any moment, especially on mild days. Several kilos of snow and ice can then fall all of a sudden. Also be careful on the outside stairs, as they are partly under the chalet roof.

THE FUSE BOARD

On arrival	Someone will have come by before you arrive to make sure the electricity has been switched on. If you notice a problem, the fuse board is in the plant room at the back of the ski room.
On departure	Unless we tell you otherwise, there is nothing to do when you leave. However, if you are asked to switch off the electricity when you leave, please switch off residual-current breakers 1, 2 and 3 and the 2 water heaters. Do not switch off breaker 5, which is for the heating.

IF SOMETHING GOES WRONG

Water leak	The main water supply is in the plant room at the back of the ski room. To turn off the water, simply turn the quarter-turn tap at mark 1 in the photo below. Then call us on (provided on booking) and Les Clés Blanches on (provided on booking).
Fire	There is a small fire extinguisher in the kitchen and a fire blanket in one of the kitchen cupboards.
Home automation	The home-automation server (a mini-PC on the floor in the cellar, next to the water heater) restarts by itself, for example after a power cut. To check that the home automation is working, open the address 192.168.1.28 in the browser of a phone or computer connected to the chalet Wi-Fi. If the page does not load, or if the heating and lights stop responding, let us know or call the concierge service.

SKIING

Ski passes	You can order your ski passes directly at courchevel.com (Ski passes section) Otherwise, the La Tania lift pass office is at the foot of the Bouc Blanc gondola.
Equipment hire	There are several ski hire shops in La Tania. We recommend Skiset for their choice and their maintenance equipment. You can book online at: http://www.skiset.com/
The slopes	The best ski area in the world is right on your doorstep. You will find plenty of information on the website: www.les3vallees.com We recommend having a look at the run of the day.
Skiing out and back	If there is enough snow (95% of the time in February and March), you can ski right back to the chalet. There is a little trick to finding the way; here is a link to the video that explains it. https://www.facebook.com/le.dahu.du.hameau/videos/1686602348057475

RESTAURANTS

Here are a few tips for eating out during your stay.

Le Farçon La Tania's Michelin-starred restaurant for a special dinner.	One of the best restaurants in Courchevel according to Tripadvisor (in the top 5 of some 160 restaurants in the valley), and we agree. You can find the menu here. Check it at the last minute, as it changes very often.
Les Chanterelles	For everyday meals and local specialities. Very good value for money.
Le Bouc Blanc Mountain restaurant at the top of the gondola	Yes, according to Tripadvisor, Le Bouc Blanc is the number 1 restaurant in La Tania! It has a different style from Le Farçon, but is just as enjoyable. Do take the gondola up to this mountain restaurant, open in winter and summer.

This list is not exhaustive: please tell us about your experiences, discoveries, disappointments, etc. We will keep the list up to date.

ACTIVITIES

La Tania tourist office	La Tania tourist office is immediately on your left on the pedestrian path through the resort centre (hard to miss). It will give you all the information you need to keep yourselves entertained. Before you arrive, have a look at the tourist office websites: www.courchevel.com
Swimming pools	In summer, La Tania has its own swimming pool right in the resort centre; lessons are offered and it is open to the public in the afternoon. For something bigger and more spectacular, and open in winter, try Aquamotion in Courchevel. To get there, head back towards Le Praz and, after the ski jumps, turn right up towards Courchevel. You can't miss it. https://www.aquamotion-courchevel.com/fr/
The riding centre, Courchevel	Horse lovers should pay Pauline a visit at the riding centre. You can do anything from a 30-minute ride to a week-long course. The riding centre is on the road to Le Praz, 3 minutes from La Tania. Note: in winter the ponies are not in Le Praz but in Courchevel 1850, and the activities on offer are different. http://www.centreequestrecourchevel.com/
Ice rink	In Courchevel 1850 you will find the Forum ice rink, very handy on rainy days. Forum ice rink on courchevel.com

Mountain biking	La Tania is the ideal place to try mountain biking in summer, with trails starting behind the chalet. To avoid part of the climb, you can always take the gondola (free in summer). For the less sporty, we recommend hiring an electric mountain bike in Courchevel 1850. http://www.vtt3vallees.com/location-de-velos
Getting around	If you want to get around without the car, Courchevel runs a free shuttle bus service linking all levels of the resort. The timetable is here. A little tip: if you want to go up to Courchevel 1850, you can also walk to Le Praz along the forest path (~2 km) and then take the gondolas, which will bring you to the centre of Courchevel 1850. Without a car: the nearest station is Moûtiers – Salins – Brides-les-Bains. Buses and taxis then go up to La Tania.
